## PROJECT

**Name of the project:** Detection of Fuse Blown in Distribution Transformer and Information passing To System Using GSM.

The main purpose of this project is to make a system that automatically detect fuse blown of distribution transformer and inform the central station about the causes of fuse blown using GSM module. The fuse blown of distribution transformer has three major reasons which are overloading, open circuit and short circuit. The fuse is blown due to overloading if the load (current) on the distribution transformer is exceeds then the maximum limit or safety limit. If the transmission line is damage or cutoff then there will be zero current which will cause use blown due to open circuit.
